

LASERCAD® CASE STUDY BACK TO SCHOOL

The Challenge

Our client, the Halifax Regional School Board (HRSB), required Fire Exit Plans for four wings of the Dartmouth High School totalling thirty two different plan variations... and they wanted the work done quickly and in a cost effective manner. They turned to Turner Drake's Lasercad® Space Measurement Division for a solution.

Turner Drake's Approach

The client had accurate floorplans of the building in a pdf format. We converted those plans into a format which was readable and editable by our Computer Aided Design (CAD) system. Once they were converted we were able to customise the plans to meet HRSB's requirements including a standardised legend identifying the primary and secondary evacuation routes, exit doors and "Your Current Location" marker, for the various wings of the building.

Winning Results

We were able to provide the Halifax Regional School Board with hard copies of the Fire Exit Plans expeditiously and very cost effectively.
